CO1 - ASSESSMENT TOOL - 3

MCQ TEST

Course Code	**CSA3717**	**Course Title**	**Software Testing**
CO Assessed	**CO1**	**Assessment**	**Assessment Tool 3: MCQ Test**
Weightage	**50% of CIA**	**Total Marks**	**100**
CO1 Statement	*Apply software testing principles to enhance the effectiveness of software quality assurance and improve defect detection strategies.* **(BL3)**		
Student Name	**Anchal Kumari**	**Reg. No.**	**192312255**
Section/Batch	**Slot A / 2023**	**Date**	**28-10-2026**

MCQ Test

COURSE NAME:Software Testing **COURSE CODE: CSA3717**

COURSE OUTCOME COVERED

CO1: *Apply software testing principles to enhance the effectiveness of software quality assurance and improve defect detection strategies.* Assessment Tool Weightage: 20%

Sl. No	MCQ Questions
1	A team applies systematic test design techniques during development. This reflects: a) Debugging **b) Testing as an engineering activity** c) Maintenance d) Deployment
2	If a project skips defined testing processes, what is the likely outcome? a) Faster delivery with high quality **b) Increased defects in production** c) Reduced testing cost only d) Improved documentation
3	Selecting test cases based on requirements demonstrates: a) Random testing **b) Process-driven testing** c) Ad hoc testing d) Maintenance testing
4	Applying equivalence partitioning is an example of: a) Debugging **b) Test design technique** c) Coding standard d) Deployment activity
5	A tester identifies missing requirements during testing. This shows: a) Coding error **b) Process gap** c) User error d) Hardware issue
6	Following a structured testing lifecycle ensures: a) Random defect detection **b) Improved software quality** c) Less documentation d) No defects
7	Which activity best represents testing as a process? a) Writing code **b) Executing test cases systematically** c) Deploying software d) User training
8	A tester reuses test cases from a repository. This supports: **a) Efficiency in testing** b) Increased coding errors c) Reduced coverage d) Random testing

9	If defects are tracked and analyzed, it improves: a) Coding speed **b) Software quality process** c) Deployment time d) User interface
10	Applying boundary value analysis helps to: a) Increase documentation b)

	Detect edge-case defects c) Reduce execution time d) Avoid testing
11	A tester validates system behavior against requirements. This is: a) Verification **b) Validation** c) Debugging d) Coding
12	Detecting defects before release reduces: a) Development effort **b) Maintenance cost** c) Coding standards d) Testing scope
13	Applying testing principles ensures: a) Zero defects guarantee **b) Early defect detection** c) No testing needed d) Faster coding
14	Which principle suggests testing all inputs is impossible? a) Exhaustive testing **b) Exhaustive testing is impossible** c) Early testing d) Defect clustering
15	A tester focuses on frequently failing modules. This uses: a) Random testing **b) Defect clustering principle** c) Regression testing d) Smoke testing
16	If testing starts early in SDLC, it helps: **a) Reduce defects cost** b) Increase coding errors c) Delay project d) Skip documentation
17	A tester designs test cases independently from developers. This ensures: a) Bias **b) Objectivity** c) Delay d) Redundancy
18	A tester reviews requirements for errors. Role performed is: a) Developer **b) Tester** c) Manager d) User
19	Reporting defects clearly is part of: a) Coding **b) Tester's responsibility** c) Deployment d) Maintenance
20	A tester collaborates with developers to fix bugs. This shows: a) Isolation **b) Teamwork** c) Delay d) Redundancy
21	A requirement ambiguity causes defects. Origin is: a) Coding **b) Requirements phase** c) Testing phase d) Deployment

22	Incorrect algorithm implementation leads to: a) Requirement defect b) Design defect c) **Coding defect** d) Testing defect
23	Missing validation checks are example of: a) Design defects **b) Coding defects** c) Requirement defects d) Deployment defects
24	Poor UI design causing confusion is: a) Coding defect **b) Design defect** c) Requirement defect d) Hardware defect
25	A system crash due to memory leak is: a) Requirement defect **b) Coding defect** c) Design defect d) Documentation defect

26	Classifying defects based on severity helps: a) Ignore defects **b) Prioritize fixing** c) Delay release d) Increase cost
27	A critical defect impacts: a) Minor feature **b) Core functionality** c) UI color d) Documentation
28	A minor defect example is: a) System crash b) Login failure **c) Typo error** d) Data loss
29	Defect classification helps testers to: a) Ignore bugs **b) Organize defects** c) Skip testing d) Increase errors
30	A defect repository is used to: a) Store code b) Store test cases **c) Store defect details** d) Store UI designs
31	Reusing defect data helps in: **a) Predicting issues** b) Increasing bugs c) Reducing tests d) Skipping phases
32	A defect repository improves: a) Code complexity **b) Testing efficiency** c) User interface d) Deployment speed
33	Logging defects with details ensures: a) Confusion **b) Traceability** c) Delay d) Redundancy
34	A tester uses past defect data to design tests. This is: a) Random testing **b) Experience-based testing** c) Debugging d) Deployment
35	Incorrect login validation is an example of: **a) Functional defect** b) Performance defect c) Security defect d) UI defect
36	Slow response time is a: a) Functional defect **b) Performance defect** c) UI defect d) Coding standard

37	Unauthorized data access indicates: a) UI defect **b) Security defect** c) Functional defect d) Design defect
38	Missing button functionality is: **a) Functional defect** b) Security defect c) Performance defect d) Hardware defect
39	Poor alignment in UI is: a) Functional defect **b) UI defect** c) Security defect d) Design defect
40	Applying testing principles avoids: a) Coding **b) Redundant tests** c) Deployment d) Maintenance
41	A tester validates outputs using expected results. This is: a) Debugging **b) Test execution** c) Coding d) Maintenance
42	If defects are not tracked, it leads to: a) Better quality **b) Poor traceability** c) Faster delivery d) No impact
43	Applying test process ensures: a) Random results **b) Structured testing** c) No defects d) No planning
44	Test case design based on requirements ensures: a) Low coverage **b) High coverage** c) No defects d) Less effort

45	Early testing reduces: **a) Defect cost** b) Code size c) UI design d) Deployment time
46	A tester identifies repeated defects. This indicates: a) Good design **b) Poor process** c) No issue d) Perfect testing
47	Reviewing test results helps: a) Ignore defects **b) Improve quality** c) Skip testing d) Reduce effort
48	A tester applies regression testing to: a) Add features **b) Ensure fixes work** c) Deploy software d) Design UI
49	Identifying root cause of defects helps: a) Increase bugs **b) Prevent recurrence** c) Delay testing d) Skip coding
50	A test plan ensures: a) Random execution **b) Organized testing** c) No testing d) No defects
51	Applying defect classification improves: a) Testing cost **b) Fix prioritization** c) Coding errors d) UI design
52	A tester uses historical defect trends. This helps in: a) Ignoring defects **b) Risk-based testing** c) Deployment d) Coding

53	Testing ensures product meets: a) Developer needs **b) User requirements** c) Tester goals d) Manager plans
54	A defect due to wrong requirement interpretation is: a) Coding defect **b) Requirement defect** c) UI defect d) Hardware defect
55	Applying process standards ensures: a) Poor quality **b) Consistent quality** c) No testing d) Random output
56	A tester documents defects clearly. This helps: **a) Developers fix quickly** b) Increase errors c) Delay release d) Reduce quality
57	A defect repository is analyzed to: a) Increase cost **b) Improve testing strategy** c) Skip testing d) Reduce quality
58	A tester applies black-box testing. This focuses on: a) Internal code **b) External behavior** c) Hardware d) Deployment
59	Defects found in testing phase indicate: a) Perfect design **b) Earlier phase issues** c) No issues d) Hardware problems
60	Applying structured testing improves: a) Random results **b) Product reliability** c) Coding errors d) Deployment delay

RUBRICS FOR CALCULATION:

Criteria	Weightage (%)	Level 4 (Exemplary)	Level 3 (Proficient)	Level 2 (Developing)	Level 1 (Beginning)
Conceptual Understanding	30%	Demonstrates thorough understanding; answers all questions accurately	Shows good understanding with few errors	Partial understanding; several incorrect responses	Lacks understanding; majority of answers incorrect
Accuracy of Answers	25%	All answers are correct	Most answers are correct with minor mistakes	Some correct answers; frequent errors	Mostly incorrect answers
Application of Knowledge	20%	Correctly applies concepts to problem-based questions	Applies concepts with minor errors	Limited ability to apply concepts	Unable to apply concepts
Time Management	15%	Completes quiz well within time efficiently	Completes on time with minor delays	Requires extra time or rushes through questions	Unable to complete within given time
Question Interpretation	10%	Interprets all questions correctly and responds appropriately	Misinterprets a few questions	Often misinterprets questions	Unable to understand questions
